A PETITION to the CVRD EASC (Electoral Areas Services Committee):
Please Issue a Statement of NON-Concurrence to Telus and ISED Canada
Re: Proposed Cell Towers on Ellenor Road and Dove Creek Road

Two cell towers have been proposed for the Agricultural Land Reserve, one at 1388 Ellenor Road, Comox (CVRD Area B) and the other at 3505 Dove Creek Road, Courtenay (CVRD Area C). Radiofrequency radiation (RFR) from cell towers has not been proven safe for insects, birds, animals, and trees. Canada does not have any established 'safety' limits for RFR exposure for wildlife and the environment. There is growing scientific evidence demonstrating the harm of RFR to humans, animals, and the environment. Safety can no longer be assumed. Until there has been adequate testing of wireless technology to prove it is not hazardous for human and animal health and the environment, then the precautionary principle should apply—in the interests of public health, environmental protection, and statutory compliance with provincial legislation established to protect and preserve agricultural land for farming and other compatible uses. Therefore, we request that the CVRD EASC NOT grant concurrence for said towers.
