5G WiFi network radiation hazards

we downplayed **cigarette smoke**
we ignored **greenhouse gas**
pollution let's not do it again with
5G millimeter radio waves

Dangers of 5G WiFi

Due to regulatory loop-holes, telecom providers continue to install hundreds of small cell WiFi antennae on utility poles in neighbourhoods across BC without giving notice to citizens.

These antennae are paving the way for 5G and will radiate 10 to 100 times more energy than today's 4G wireless signals – which have already been scientifically shown to be biologically hazardous. Scientists warn that higher power 5G signals will pose risks to all life on the planet: people, animals, insects and plants.

Despite no research proving 5G WiFi to be safe, all of this is happening thanks to deceptive marketing, under-informed politicians, and academics who look the other way to protect their careers.

It is up to us to say no. Come to the talks to find out how.

Public presentations

Come listen to **Martin Pall**, PhD, Professor Emeritus in Biochemistry and Basic Medical Science from Washington State University, a leading expert on the biological effects of radiation from cell phones, WiFi and proposed 5G wireless technology. He will be giving public talks from **June 24 to July 7** at these locations:

Salt Spring Island – June 24-29

Victoria – July 3

Nanaimo – July 4

Bowen Island – July 5

Vancouver – July 6

Surrey – July 7
