

SafeZone EMF Inspections is for sale

Safezone EMF inspections performs electromagnetic radiation inspections of all current forms of electromagnetic radiation in the environment. This includes radiofrequency fields, electric fields [encompassing dirty electricity and body voltage], magnetic fields, nuclear radiation, toxic light frequencies and spectrums known as **light pollution**, and others. Safezone was started by Ross Andersen DC, ND in 2014. He started doing EMF inspections in the mid-80s with his patients and took the years from 2004 – 2014 off, to recuperate from a cancer issue, likely caused by excessive cell phone use.

Safezone also evaluates the electrical circuitry of a home or business for quality and function. This is above and beyond the normal scope of EMF consulting, but is a very important factor in eliminating dirty electricity and increasing the safety of the residents.

Safezone has developed specific, proprietary protocols for inspections which increase the safety of the inspector and the knowledge base of the client. These protocols have been developed over the last five years with hundreds of inspections throughout Canada. A vast knowledge base has been accumulated which will be passed on to the purchaser.

Equipment replacement costs run in the range of \$15,000 and can be seen in the attached list.

Training will consist of a minimum of five home or business inspections which will be used for training purposes and offered at a reduced rate. Additional training sessions will include hands-on training for all metering devices and their use during inspections. Training will not be finished until Safezone is satisfied with the competency of the purchaser. Safezone's goal is to have the state-of-the-art work, that is taken years to develop, continue for the people of the Okanogan Valley and other parts of Canada. Continued support will be offered by consultation if needed. Safezone will perform public presentations as arranged by the purchaser, until the purchaser has a competence level to do these presentations autonomously.

All advertising materials and templates are included in the cost of the purchase. Much other advertising material is included, such as DVD presentations and original articles. It is the duty of the purchaser to bear the costs of advertising from the point of sale into the future. Extensive advertising materials are included.

All relationships with suppliers have been prearranged for succession to a purchaser. All suppliers have agreed to treat the purchaser with the same respect and afforded discounts as Safezone has enjoyed.

This is an extremely advantageous time for someone to purchase this business. 5G is dramatically increasing the awareness of the general populace to the dangers of

electromagnetic radiation. From this point on, acceptance of electromagnetic radiation inspections is and will be much more accepted as a normal function.

The asking price for this business is \$15,000 Canadian funds. \$5000 is asked as initial payment and procurement of the first position. A second payment of \$5000 will be required at the beginning of training. The final payment will be made upon completion of training based upon the competency of the purchaser.

Safezone Meter Inventory and Pricing

Gigahertz NFA 1000	\$2600
Gigahertz HF59B Kit	\$2500
Amprobe INSP –3	\$400
Safe Living Technologies OFC – 1	\$383
Body Voltage Testing meter	\$100
Greenwave dirty electricity meter	\$200
Fluke scope meter	\$7000
