

PUBLIC HEALTH NOTICE

Telecommunications “small cell” antennas and equipment are being installed on street lights, buildings and poles throughout Michigan, to accommodate 5G, the 5th generation/next generation of wireless technology.

Small cell antennas emit microwave and millimeter wave radiation, and are being installed closer together, lower to the ground, and in closer proximity of our homes, schools and places of work, exponentially increasing our exposure to this radiation.

Peer-reviewed published research has proven that prolonged exposure to non-ionizing wireless radiation has adverse biological effects, including increased risk of cancers, tumors and diabetes. Exposure can also cause headaches, insomnia, nose bleeds, rashes, and dizziness/vertigo, ringing in the ears, heart palpitations/arrhythmia, anxiety, depression, suicide and more.

Children and the elderly are more vulnerable to harm from non-ionizing radiation. Plus, safe levels for long-term continuous exposure have **NEVER** been established.

We have a right to know the biological health impact and the environmental impact of the new 5G small cell antenna wireless infrastructure currently being installed throughout Michigan.

Time Sensitive Call to Action

Please call your Michigan State House Representative and Michigan State Senator today! Ask them to “Support legislation calling for a Moratorium on small cell antenna installations until biological health impact and environmental impact is assessed.” Thank you!
