The ElectroSensitive Society is Hosting: Webinar #2 with Dr. Corey Deacon

We are returning with Dr. Corey Deacon, who is back by popular demand!

The purpose of this webinar series is to help doctors assess & treat patients with electromagnetic sensitivity (EMS) or electromagnetic illness (EMI). We will be featuring **novel ways to assess and treat patients** and will be presenting new developments in wireless technology and policy that affect doctors and their patients. For more information, contact the Director of the ElectroSensitive Society, sheenasyington@gmail.com.

This **webinar series** is designed for health care providers and medical doctors but anyone interested in EHS is welcome to attend. Please **register for this free event** and sign up to receive notifications of **upcoming webinars**. If you would like to present at one of these webinars, contact Magda at drmagdahas@gmail.com.

Light up your Life: The Overlooked EMF with Extraordinary Healing Potential

Sufferers of EHS are often highly aware of the radio frequencies, microwave radiation, wireless technology, dirty electricity and the effects of magnetic fields on their health. The prime culprit of dysfunction due to excess exposure to these technologies is the mitochondria. Disruption in voltage gradients causes difficulties with mitochondria to tell time (AKA circadian rhythm functions). One often overlooked spectrum of EMF that plays a SIGNIFICANT role in repairing and regenerating these 'time' cycles is the visible light spectrum (AKA light). In these EMF wavelengths quantum information is carried to our body which then triggers cascades of effects that regulate immunity, hormones, neurotransmitters, autophagy, cell cycles, growth and repair, digestive functions and more. The circadian rhythm regulation tells our body WHEN to do WHAT and when light exposure is deviant, all of our body systems can start becoming dysfunctional. In this presentation Corey will outline the basics of the circadian rhythm, the effects on the body, what happens when it deviates from normal functioning, and how to regulate it using light and temperature protocols to resolve inflammation, neurological issues, digestive problems, hormone regulation issues and more.

Dr. Deacon's first presentation is available here:
