

CARE – CANADIAN ALLIANCE FOR REDUCING ELECTRO-SMOG

DRAFT

MISSION

CARE's mission is to connect Canadian groups and individuals who are concerned about harmful electro-smog emissions. These include wireless radiation emissions from network cell antennas on towers, microcells on lamp-posts, cell phones, Bluetooth and Wi-Fi. To educate and inform residents, the health community, elected representatives and others about the risks of exposures to electro-smog to maintain and achieve healthy communities. To help empower residents in resisting cell tower and small cell antennas in their community and elsewhere. To work together to have a positive impact and make meaningful changes.

GOALS

- To connect individuals and groups across Canada so that they can work together to reduce harmful electro-smog in their communities and beyond.
- To educate people and provide easy tools to help others do the same.
- To create awareness about safe tech and the mountain of evidence showing harm from wireless technologies.
- To create awareness and provide solutions about privacy and security risks of wireless technologies.
- To help create new wireless non-ionizing radiation safety standards, guidelines and regulations, that protect humans and the environment including pets and wildlife including pollinators.

VISION

CARE's vision is to create and live within a world where safe and responsible technology is the norm. Where people and the environment are fully protected from harmful electro-smog.
